HYDRO DEMOLITION

Hydro-demolition and Shotcrete application for the Haverhill Stadium Phase 3

Description: Hydro-demolition of deteriorated concrete, installation of shear pins, rebar and mesh and application of dry-mix shotcrete on vertical and overhead surfaces, placement of new CIP Concrete construction for ADA compliance and Waterproofing membranes. Excavation for new foundation and drain line installations, back fill and compact excavation after installation working with Briggs Engineering for compaction and materials testing. This project demonstrates Aulson abilities for demolition of failing concrete surface and shotcrete application to an inlet wall, excavation and completed foundation wall, backfill, and drainline installation.
