High Angle Painting — Surface Preparation and Coatings Installation — Including Hazardous Coatings Removal at the United States Capitol Dome in Washington, DC.

Description: All existing hazardous lead-containing paint was removed from the entire Skirt structure including all structural cast iron within the Skirt. This entire project was done under full containment and negative air while Congress was in session. Performed surface preparation via abrasive blasting. After the coating was removed and prior to the installation of a new high performance coating system, the Architect identified and scheduled for repair, the defects, cracks, and joint failures in the Skirt's cast iron plates. All lead paint and hazardous waste materials were disposed of in accordance with all Local, State, and Federal Regulations.

Owner: Architect of the Capitol

Contract Value: Over \$8M

Completion Date: Fall 2012
